APOLLO CLIENT

REQUEST HANDLING

OUTLINE

▸ Query request handling

▸ Mutation request handling

▸ Afterware

REQUEST STATUS

▸ Loading

▸ Request Success

▸ Request Error

REQUEST HANDLING

QUERY

QUERY RESPONSE

▸ Pass query result to component in prop called data

  ▸ loading - true when fetch or refetch

  ▸ error - ApolloError object

  ▸ ...fields - key for each root query

MUTATION

MUTATION

▸ Mutation function return promise

  ▸ ...fields - use then

  ▸ error - use catch

  ▸ loading - need to define loading state

HANDLE MUTATION STATE BY PROPS

▸ react-apollo-mutation-state

  ▸ A React HOC for Apollo GraphQL mutation, provides loading & error as props

REQUEST HANDLING

AFTERWARE

AFTERWARE

▸ Similar to a middleware, except that an afterware runs after a request has been made
